) Logististish regresjon: Finne separasjon mellom to klasser  $y = {90,13}$ 

W trenes fales gjennom gradient descent.

g angir 5sh for enten y=0 eller y=1 (grenze går på 0,5).

Mest naturlig å
tro at linja

y = 1 - x er dm
beste slike linja...

N samples, d'features:

$$W = \begin{bmatrix} w_i \\ w_z \end{bmatrix}$$
 $y = \underbrace{X \cdot w}_{w} \quad \text{kan da shrives}$ 
 $y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$ 
 $y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$ 
 $y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$ 

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

$$y = \underbrace{x \cdot w}_{w} \quad \text{kan da shrives}$$

a) hogistisk regnesjon, se Ethem Alpaydin, kap 10.7, fig 10.6.

Generalt for gradient descent algoritme:

repeat 
$$\{$$
 $W_j := W_j - \alpha \frac{\partial \mathcal{F}(\underline{w})}{\partial w_j}$ 

F: Kostnadsfrunk. Lo Gjøres for alle W; til honvergens.

a: Lorings rate

\* Trenger à cette # iterasjoner.

\* Kan lage en koest - funksjon og så fær å se at den avter pr. iterasjon

 $J = -\frac{1}{N} \sum_{i=1}^{N} y_i \log (\sigma(x_i)) + (1-y_i) \log (1-\sigma(x_i))$ 

def cost (X, y, w):

N = y shape [0]

J = 0

for i in range (N)

h = sigmoid (X[i,:]@W)

J = J - 1 ( y@ log ( h) + (1-y) log (1-4)

\* NB: Brak np. log og np. exp.

ilke math.log, math.exp.
